

Candidate proteins for mutant p53 conversion into wild type conformation, found in embryonic stem cells (Ramot)

code: 10-2013-696

[Tamar Geiger](#), T.A.U Tel Aviv University, Medicine-Sackler Faculty, Human Molecular Genetics
[Varda Rotter](#), Weizmann Institute of Science (WIS)

The invention provides methods for stabilization of mutant p53 in embryonic stem cells by interacting proteins, compositions comprising the same and uses thereof for treatment of various conditions associated with mut-p53, such as, cancer.

Additional information can be provided upon request.
