Abstract of **WO2006106524**

A structure is presented for use in optic and electro-optic devices. The structure comprises at least one region of an amorphous KLTN-based material in a KLTN-based material. Also provided is a method of processing a KLTN-based material, comprising at least one of the following: bombarding said KLTN-based material with light ions; and etching said KLTN-based material when in amorphous state by an acid; thereby allowing fabrication of one or more optical components within the KLTN-based material.
