

LACTIC ACID BACTERIA FOR THE PRODUCTION OF ETHANOL FROM BIOMASS MATERIAL (Ramot)

code: 2-2014-803

[Raphael Lamed](#), T.A.U Tel Aviv University, Life Sciences, School of Molecular Cell Biology & Biotechnology

The present invention, in some embodiments thereof, relates to methods and recombinant lactic acid bacteria for the production of ethanol from biomass material by a consolidated bioprocessing approach.

Additional information can be provided upon request.
