

Anti-oestradiol-6-carboxymethyl oxime monoclonal antibody (Yeda)

code: T4-141

[Fortune Kohen](#), Biology, Biological Regulation

Summary

Monoclonal antibodies for peptide and steroid hormones Due to their high specificity and sensitivity these antibodies may be applicable for research, diagnosis and therapeutics. A particular use may be quality control of industrial manufacturing of food products.

127, 274, 141 - Monoclonal antibodies to estradiol Description: Monoclonal antibodies raised against oestradiol-6-carboxymethyl oxime-BSA. Available clones: 2F9 (Rat, IgG2a), 15 (IgG2b), 8D9 (IgG2a). Estradiol is a [sex hormone](#), which has not only a critical impact on reproductive and sexual functioning, but also affects other organs, including the bones. In the female, estradiol acts as a growth hormone for tissues of the reproductive organs.
